

Bug Report: 1

Test Password Change Functionality in Discord App

Reported By:

MULUGETA BEIENE

Date:

04/26/2025

App Version:

current version of Discord 0.0.343

Operating System:

macOS Big Sur

Device:

Mac

Summary:

Issue encountered while attempting to change the password in the Discord app. The password change functionality does not work as expected, causing users to be unable to successfully update their passwords.

Steps to Reproduce:

1. Open the Discord app and log in to your account.

- 2. Navigate to User Settings by clicking on the gear icon.**
- 3. Select the "My Account" tab.**
- 4. Click on the "Change Password" button.**
- 5. Enter the current password and the new password in the respective fields.**
- 6. Confirm the new password by entering it again.**
- 7. Click the "Save" or "Update" button.**

Expected Result:

The password should be changed successfully, with a confirmation message displayed, and the user should be able to log in with the new password.

Actual Result:

After clicking the "Save" button, an error message appears stating “Password change failed. Please try again later.” The password remains unchanged.

Frequency of Occurrence:

Occurs every time the password change process is initiated.

Additional Information:

- Ensure that the new password meets all specified criteria (minimum length, required characters, etc.).
- No specific error code is provided with the failure message.
- Internet connection is stable during the testing process.

Priority:

High

- Users may be unable to secure their accounts if they cannot change their passwords.

Screenshots/Attachments:

[Attach any screenshots that illustrate the issue if available]

Notes:

Please investigate if this issue is isolated to specific devices or accounts, or if it is a widespread problem affecting all users.

Feel free to adjust any sections or add additional details specific to your experience or findings!

Bug Report: 2

Load Time Measurement for Discord App

Reported By:

MULUGETA BEIENE

Date:

04/26/2025

App Version:

current version of Discord 0.0.343

Operating System:

macOS Big Sur

Device:

Mac

Summary:

Performance issue identified related to the loading time of the Discord app, specifically the duration taken to reach the dashboard after launch. This delay may impact user experience.

Steps to Reproduce:

- 1. Close the Discord app completely if it is running in the background.**
- 2. Open the Discord app on the device.**
- 3. Start a timer as soon as the app icon is clicked to launch.**

4. Wait until the app fully loads and displays the dashboard.

Expected Result:

The app should load and display the dashboard in a timely manner, ideally within a few seconds, enhancing user experience.

Actual Result:

The app took approximately [insert measured time, e.g., 15 seconds] to load and reach the dashboard.

Frequency of Occurrence:

Consistently occurs every time the app is launched.

Additional Information:

- Ensure that the device is connected to a stable internet connection during testing.**
- Perform the test under varying conditions (e.g., different times of day,**

while connected to Wi-Fi vs. mobile data).

- Note any background applications that may affect performance during testing.

Suggested Priority:

Medium – While the functionality is not broken, excessive load times may deter user engagement and satisfaction.

Screenshots/Attachments:

[Attach any relevant screenshots showing loading screens if available]

Notes:

Further investigation into app performance on various devices and configurations may be necessary to identify the root cause of the extended load time. Potential areas of focus could include optimizations in app startup processes or network response times.

Feel free to modify or add any details based on your testing experience!

Bug Report:3

Test App Compatibility with Screen Readers (VoiceOver, TalkBack)

Reported By:

Mulugeta beiene

Date:

04/26/2025

App Version:

current version of Discord 0.0.343

Operating System:

macOS

Device:

Mac

Summary:

Accessibility issues observed related to the compatibility of the Discord app with

screen reader technologies (VoiceOver on iOS/macOS and TalkBack on Android). Users who rely on these tools may encounter difficulties navigating the app.

Steps to Reproduce

for VoiceOver (iOS/macOS):

- 1. Enable VoiceOver in the device settings.**
- 2. Launch the Discord app.**
- 3. Navigate through the app using gesture controls or keyboard shortcuts with VoiceOver enabled.**
- 4. Test the following key features:**
 - Logging in**
 - Accessing channels and messages**
 - Sending messages**
 - Changing user settings**

Steps to Reproduce

for TalkBack (Android):

- 1. Enable TalkBack in the device accessibility settings.**
- 2. Launch the Discord app.**
- 3. Navigate through the app using swipe gestures or keyboard input while TalkBack is active.**
- 4. Test the same key features as listed above.**

Expected Result:

All elements of the Discord app should be fully accessible with appropriate voice feedback provided by the screen reader for navigation, controls, and features. User actions should be clearly communicated.

Actual Result:

- Some buttons and navigation elements are not properly labeled, leading to confusion.**

- Voice feedback is inconsistent or missing for certain features, such as channel notifications or user status.
- Users may encounter difficulties sending messages or accessing settings due to lack of clear guidance.

Frequency of Occurrence:

Occurs consistently regardless of the device used for testing (iOS/macOS for VoiceOver and Android for TalkBack).

Additional Information:

- Testing was conducted on [insert specific devices used, e.g., iPhone 13 for VoiceOver, Samsung Galaxy S21 for TalkBack].
- It is essential to ensure that all users, including those using assistive technologies, have equitable access to app functionalities.

Suggested Priority:

High – Accessibility is critical for ensuring all users can effectively use the app. Enhancements should be prioritized for a better user experience.

Screenshots/Attachments:

[Attach any relevant screenshots that illustrate accessibility issues if available]

Notes:

Consider consulting users who rely on screen readers for feedback and recommendations to improve app functionality and accessibility in future updates

Feel free to customize this report with specific details based on your findings!

bug report 4

file upload and download functionality:

Title:

**File Upload and Download Fails for
Images and Documents in Discord App**

Reported by:

Mulugeta beiebe

Date:

03/05/2025

App Version:

current version of Discord 0.0.343

Platform:

Windows 11

Severity:

High

Priority:

High

Environment:

Stable internet connection, tested on Wi-Fi and mobile data

Precondition:

User is logged into a valid Discord account and is a member of at least one server or DM channel with media sharing permissions.

Steps to Reproduce:

- 1. Open the Discord app.**
- 2. Navigate to any channel or direct message.**
- 3. Attempt to upload an image or document (e.g., .jpg, .png, .pdf).**

4. Send the uploaded file.

5. Attempt to download the sent or received file.

Expected Result:

File should upload and be sent successfully. The recipient (or sender) should be able to download and view the file without issues.

Actual Result:

- **Upload fails intermittently or shows “Upload Failed” error.**
- **File appears as a broken link or grey placeholder.**
- **Download button is unresponsive or file fails to download after tapping.**

- In some cases, the file appears to upload but is not visible to recipients.

Attachment:

[Include screenshot or screen recording if possible]

Notes:

- Issue occurs with both image and document file types.
- Issue tested on both mobile and desktop apps, same behavior observed.

- **Clearing cache and reinstalling app does not resolve the issue.**
- **No issues observed in the web version.**

Here's a clear and concise bug report for the Discord app regarding channel visibility:

Bug Report5

Title:

Channel Visibility Not Working as Expected for Certain Users

Reported on:

Mulugeta beiene

Environment:

Discord App (Desktop/Mobile/Web) - Steps to Reproduce:

- 1. Go to a Discord server where channels have restricted permissions.**
- 2. Assign a role to a user that should have access to a specific channel.**
- 3. Confirm the channel's visibility settings allow the role to view it.**
- 4. Log in as the affected user or have them check.**

Expected Result:

Users with the assigned role should be able to see the channel in the server list.

Actual Result:

The user cannot see the channel, even though permissions appear correctly configured.

Impact:

Users may miss important discussions or content due to incorrect visibility, especially in role-based communities or moderated servers.

Additional Information:

- **Occurs for both new and existing users.**
- **Role hierarchy and permission inheritance have been reviewed.**
- **Issue persists after app restart and re-login.**
